

CH-air A Type actuator identification

CH-ID/01

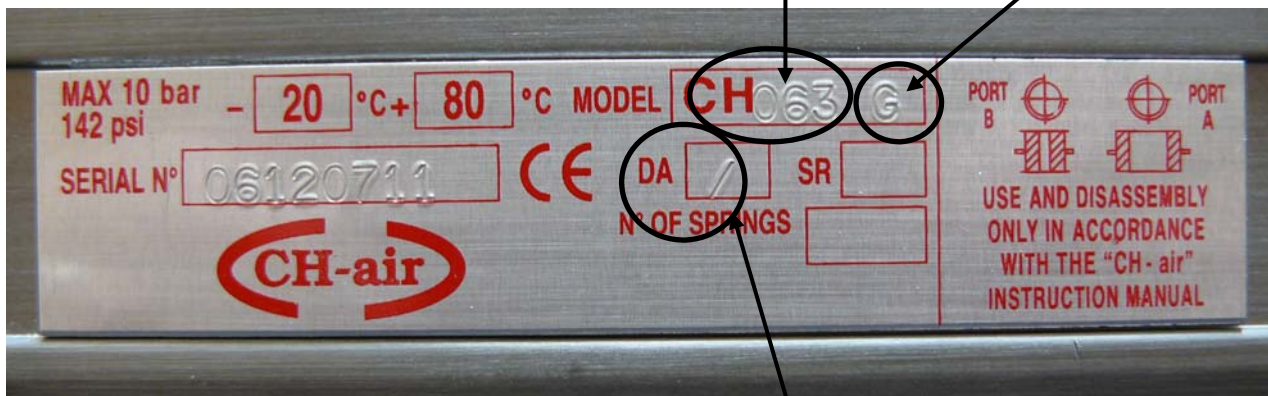

Jan 2008

When identifying a **CH-air** A Type actuator, we need to know (a) the *size* (model number) and (b) the *function* (DA, or SR + springs)
This information is given on the nameplate on the side of the actuator. Due to the reliability of these actuators and their longevity in service, we do not record serial numbers. However, there is a date code in the number, the first 2 numbers are the year, and the 3rd and 4th numbers are the month, of manufacture.

(a) *Size* →

ACTUATOR MODEL NO

G = BSP AIR PORTS

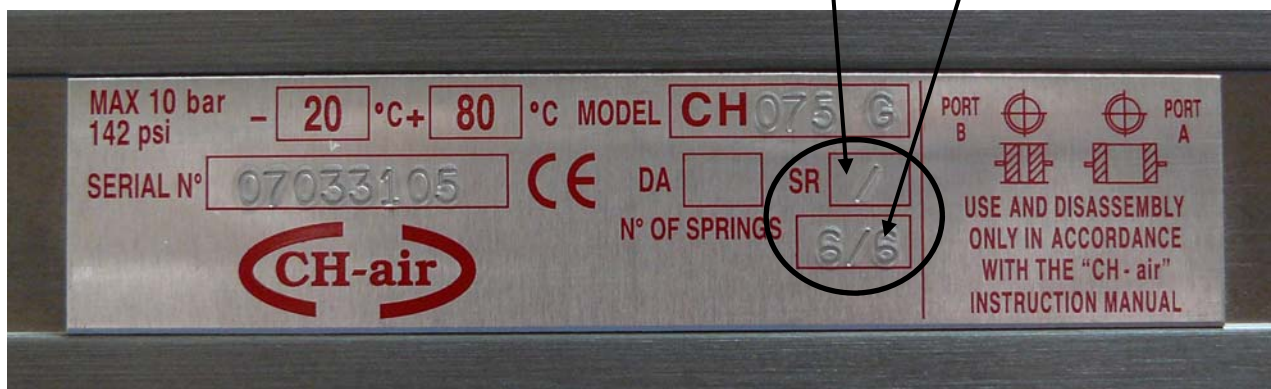

DA = DOUBLE ACTING VERSION
= AIR OPEN, AIR CLOSE

OR

(b) *Function* →

SR = SPRING RETURN (SINGLE ACTING)
= AIR OPEN, SPRING CLOSE
+
= NO OF SPRINGS INSTALLED

** Please note that if you are trying to identify an assembly (valve & actuator package), the above only identifies the actuator, and not the full assembly. To help identify the valve, please provide all information stamped on the valve, or on its nameplate.
